## Test&Measurement

# Enhanced Productivity in a Compact Instrument

DLM3000 Series Mixed Signal Oscilloscope

**Precision Making** 

Bulletin DLM3000-01EN

## **Productivity at your fingertips**

The new DLM3000 builds on Yokogawa's oscilloscope legacy with new features focusing on quality, flexibility and usability to increase our users' productivity and meet the advanced needs of today's mechatronics designs. Integrating the latest in touchscreen operation, solid-state storage, and high speed signal processing, the DLM3000 enhances productivity by providing clean signals, extensive processing, and ease of operation.

Quality – Yokogawa is committed to measurement quality, and the DLM3000 features lower residual noise, extensive voltage ranges and a variety of real-time low pass filters to ensure the fidelity of your signals.

Flexibility – Channel count and memory depth options combined with optional Power Math and serial bus features including major automotive buses ensures an oscilloscope can be configured for a variety of needs.

**Usability** – The combination of a touchscreen with a traditional panel of oscilloscope controls allows users to seamlessly transition, while communication and storage options make it easy to access large data sets.

# **Compact & intuitive operation**

## Easy-to-Use & Easy-to-See Portrait design

## Easy to use portrait design

The large display of a DLM3000 is located above the controls; this enables it to be nearer the eyes of the user and keeps the footprint on the bench to a minimum.

The intuitive controls are laid out so that a user can see at a glance what channels and features are switched-on and quickly make the measurements that are needed.

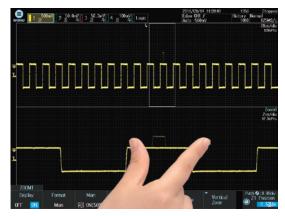

## Easy to configure 8.4 inch display

Users can automatically or manually split the display to separate individual channel waveforms while maintaining their full resolution and dynamic range. It is therefore easy to see the details of all signals regardless of the number of channels in use. The portrait format saves space on the desk or test bench. The DLM3000 is "a compact personal oscilloscope" designed for easy viewing and ease of use.

## Intuitive operation with capacitive touchscreen

Touch system user interface provides intuitive operation. Cursor, zoom box, waveform display area, and more can be set quickly by familiar drag and pinch operations.

Conventional buttons and keys are within easy reach so users have the benefits of both control styles.

Changing zoom ratio

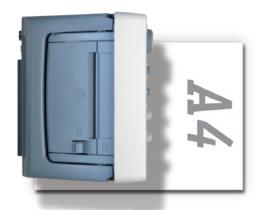

Selecting waveform parameter items

- 1 8.4-inch XGA LCD & Capacitive touchscreen
- 2 Vertical Position and Scale Knob
- 3 Horizontal Position and Scale Knob
- 4 Trigger Control Keys and Level Knob
- 5 Dedicated Zoom Keys
- 6 Logic input connector
- 7 USB peripheral connection terminal
- 8 Jog Shuttle and Rotary Knob
- 9 Four-Direction Selector Button Select key moves the cursor up/down/left/right

## Large screen in a compact body

Footprint is approximately 2/3 the size of an A4 size paper (depth of approximately 200 mm)

# **Best-in-class long memory**

## Large capacity memory up to 500 Mpoints

Long memory is necessary to maintain high speed sample rates during long-term measurements.

## [Basic Formula] Measuring time = Memory length/Sample rate

If 500 Mpoints (Memory expansion option /M2) is installed, up to 0.2 seconds waveform can be captured even at 2.5 GS/s sample rate while taking 2-ch Single Mode measurements.

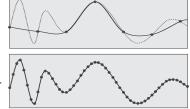

#### Relationship between measuring time and sample rate in 500 Mpoint

Sample rate	Maximum measuring time
2.5 GS/s	0.2 s
250 MS/s	2 s
25 MS/s	20 s
2.5 MS/s	200 s
250 kS/s	2000 s
100 kS/s	5000 s

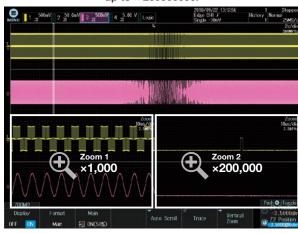

More memory is needed to use higher sample rates and capture the most accurate waveform representation.

## Waveform of 500 Mpoints can be magnified up to × 200000000.

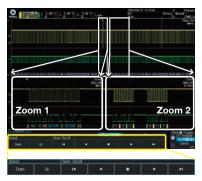

Detailed waveform measured for 20 seconds are shown in 20 milliseconds and 100 microseconds span.

## Zoom & search function

Find the most important data rapidly using two independent zoom locations and a variety of search functions.

## Zoom two locations simultaneously

Because the two zoom locations can be set individually, you can display two events side-by-side, ideal for finding cause-and-effect relationships. Also, Use Auto Scroll to sweep the zoom window across the waveforms automatically. With Auto Scroll you can choose forward, backward, fast-forward, scroll speed, and other control options.

Auto Scroll menu

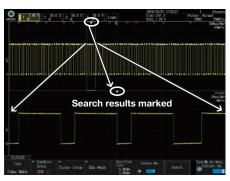

## **Zoom Search function**

Use several search criteria to automatically find and zoom into features in the waveform for further inspection. The locations of the found waveforms are marked on screen

(vshows the current location).

## • Waveform search criteria

Edge, pattern, pulse width, time out, serial bus (only on models with the serial bus analysis option)

Waveform search using edge criterion

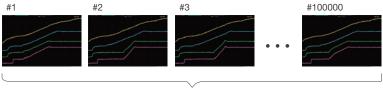

# **Original History function**

## **Automatically save previously captured waveforms**

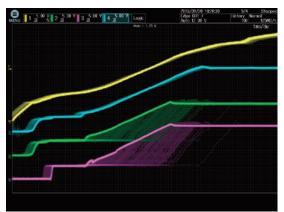

## You can replay waveforms later on, so you'll never miss an abnormal waveform

With the DLM3000 series, up to 100000 previously captured waveforms can be saved in the acquisition memory. With the History function, you can display just one or all of the previously captured waveforms (history waveforms) on screen.

You can also perform cursor measurement, computation, and other operations on history waveforms. Using the History function, you can analyze rarely-occurring abnormal signals even when an appropriate trigger condition is hard to find because its waveform shapes are not constant.

View individual captures to identify the relationship between channels at a specified moment in time.

All waveform display mode

abnormal waveform

Extract

One waveform display mode

## **History search function**

Various search methods are available to search up to 100,000 waveforms for events meeting your custom requirements.

# Replay function

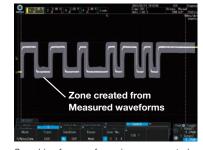

You can automatically play back, pause, fast forward, and rewind waveform history record.

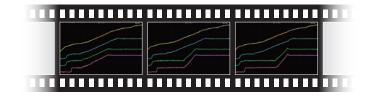

## Example of specified waveform search

Searching for waveforms that pass through or do not pass through a rectangular zone placed on screen.

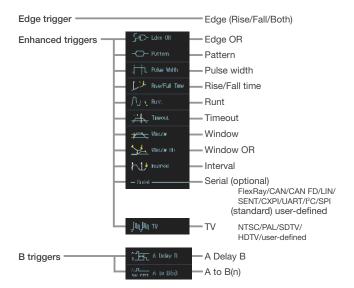

Searching for waveforms in zones created by moving measured waveforms up/down/left/right.

# Large selection of triggers and filters

## Trigger function captures combined analog/digital complex waveforms

The DLM3000 series comes with a variety of easy-to-configure triggers combining analog and logic inputs such as edge, enhanced, and B triggers. By using a digital trigger system, trigger errors are minimized.

## **Trigger function examples**

#### A to B(n) trigger

Example: Trigger on the 7th edge of signal on B. This is effective for measurements with shifted timing, such as non-standard video signal vertical/horizontal periods or motor reference position pulses and drive pulses.

#### Serial pattern trigger (user defined)

Example: Trigger on an arbitrarily set pattern of up to 128 bits. This is effective for detecting ID/Data and other portions of proprietary communication formats.

Pattern configuration screen

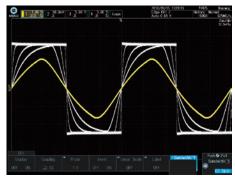

# Real time filter with optimum noise reduction supports a wide range of frequencies (from 8 kHz to 200 MHz)

The DLM3000 series has two types of filters: one processed at the input circuit and one based on MATH functions. These filters are effective for rejecting unwanted signals, allowing observation of only the desired bandwidths.

## Real time filters

Each channel has 14 low pass filters available from 8 kHz to 200 MHz. Waveforms are filtered previous to storage in memory.

Cutoff frequencies: 200 MHz, 100 MHz, 20 MHz, 10 MHz, 5 MHz, 2 MHz, 1 MHz, 500 kHz, 250 kHz, 125 kHz, 62.5 kHz, 32 kHz, 16 kHz, and 8 kHz

Processing with built-in filters

## **Computed digital filters**

The input waveform can be filtered using an IIR filter, which is a MATH function. Filtered waveforms can be displayed at the same time as the input waveform for comparison. You can select low pass or high pass filters.

Cutoff frequency setting range: 0.01 Hz to 500 MHz

Filtering of a PWM waveform using computation

# Features designed for productivity

## Displays trends of peak-to-peak or pulse width per cycle

#### Measure function and statistics

Twenty-nine waveform parameter measurements are included. Automated measurement of up to 30 simultaneous measurements is available. Statistical values can also be measured continuously, cycle-by-cycle or using history memory. In addition, cycle-by-cycle parameter

measurement is possible to calculate

fluctuations of a captured waveform.

# Measures voltage/time differences automatically

#### **Cursor Measurement**

Cursors can be placed on the displayed waveform from signal data, and various measurement values at the intersection of the cursor and waveform can be displayed. There are five types of cursor;  $\Delta T, \, \Delta V, \, \Delta T \& \, \Delta V, \, Marker, \, Degree Cursor.$ 

Simultaneous level and time difference measurement with the ΔT & ΔV cursor

## Trend and histogram displays

Waveform parameters such as period, pulse width, and amplitude can be measured repeatedly and displayed in graphs. In a single screen you can observe period-by-period fluctuations, compute amplitudes every screen using multiple waveforms, and display amplitudes as trends. You can also display histograms referencing the voltage or time axis using values from repeated automated measurement of waveform parameters.

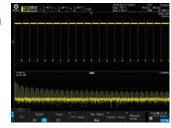

Trend display of waveform parameters Histogram display using the time axis

## **Analyzes frequency spectra**

## FFT analysis

Up to 2 FFT analyses can be performed simultaneously. FFT can be performed on computed waveforms in addition to the actual waveforms on CH1 to CH4. Analysis can be useful for filtering, rotating machinery and other phenomena.

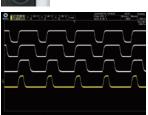

FFT analysis

## Keeps waveforms with one push

## **Snapshot**

By pressing the "n" key to the lower right of the screen, you can freeze a white trace of the currently displayed waveform on the screen. You can press the key repeatedly and conveniently leave traces for comparing multiple waveforms. Also, snapshot data recorded on screen can be saved or loaded as files, and can be recalled for use as reference waveforms when making comparisons.

Using snapshots (white waveforms)

## Displays stored files in thumbnail format

## Thumbnails of saved files

Display thumbnails of saved waveforms, waveform images, and Wave Zone files for easier browsing, copying or deleting. A full-size view shows even more details.

Thumbnail can be viewed full-size

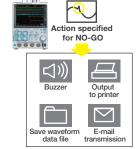

Thumbnails of saved files

## Has a GO/NO-GO function

## **Action on trigger**

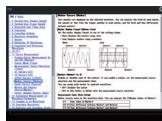

GO/NO-GO automates pass or fail determination for trigger conditions, waveforms, measured parameters, and other criteria. Actions automate buzzer sounds, file saving, or email notification. Waveforms in which an abnormality occurred can be saved for confirmation and analysis of the phenomena at a later time.

#### Abnormal waveform detected

# Can check functions with graphical online help

Get help without having to find the user manual. Pressing the "?" key opens detailed graphical explanations of the oscilloscope's functions.

# **Application-specific analysis options**

## Serial analysis function options (/F01 to /F05)

## UART (RS232)/I<sup>2</sup>C/SPI/CAN/CAN FD/LIN/FlexRay/SENT/CXPI

Serial bus communication is ubiquitous in all kinds of applications including automotive applications. These buses are adopted everywhere from brake systems to car navigation systems. Communication between electronics control units (ECU's), sensors and actuators is especially important to ensure proper vehicle performance.

In addition to verifying the digital logic of the protocol, developing and verifying these systems also requires analog physical-layer verification of waveform quality, noise, and simultaneous measurement of sensors and actuator signals. The DLM3000 with the serial bus decode functions can display decoded bus data and physical layer waveforms simultaneously, perfect for validation and troubleshooting.

## Unique auto setup

Serial bus analysis typically requires numerous settings such as bit rate, voltage threshold, logic polarity, sampling point and trigger condition. These complicated settings can make it difficult to capture data and require long setup phases. Yokogawa's proprietary auto setup function automatically analyzes the input signal and complex parameters such as bit rate and threshold level, selecting the optimal settings in seconds. This feature not only saves time but is also a powerful debugging feature when the bit rate and other parameters are unknown.

## Simultaneous analysis of up to 4 buses

Perform high-speed simultaneous analysis on up to four different serial buses operating at different speeds. Extensive search capabilities enhance the usability, allowing the user to find specific data in the very long memory. The dual-zoom facility means that different buses can be viewed and debugged alongside each other.

Serial bus auto setup

Four bus decode and list display

## User defined math option (/G02) Power supply analysis option (/G03)

Create arbitrary calculations using a suite of operations such as arithmetic, trigonometric, pulse width and more. Dedicated power supply analysis options are available for switching loss, I2t, SOA analysis, harmonic analysis of power supply, and other power parameter measurement (4 ch models only).

## Switching loss analysis

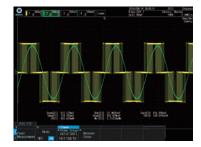

Calculate switching loss  $[V(t) \times i(t)]$  over long test cycles utilizing the long built-in memory. A wide variety of switching loss analyses are supported, including turn-on/off loss calculation, loss including continuity loss, and loss over long cycles of 50 Hz/60 Hz power line.

## Power parameter measurement

Measure power parameters automatically for up to two pairs of voltage and current waveforms, such as active power, apparent power, power factor, and more. Cycle statistics and history statistics can also be calculated.

# Analog/logic simultaneous measurement

## Flexible MSO input

Four channels is not sufficient to view the functioning of digital control circuits. The DLM3000 series converts 4 ch of analog input to 8-bit logic, and functions as a 3 ch analog + 8-bit logic MSO (mixed signal oscilloscope).

4 ch analog

3 ch analog + 8-bit logic

# The performance of up to 11 inputs by converting to logic

Using logic input, up to 11 input signals can be observed simultaneously as 3 ch of analog and 8-bit logic. It is not only possible to use logic input for observation of data and control signals, or as a trigger source, but also for logic input analysis of I<sup>2</sup>C, SPI and some other serial busses.

Example of logic probe connection

# Wide range of interfaces and software

## Increase work efficiency by using PC

The totally new CPU platform of the DLM3000 is equipped with Gigabit Ethernet and USB 3.0<sup>-1</sup> as standard communication interfaces, handling data faster than ever.

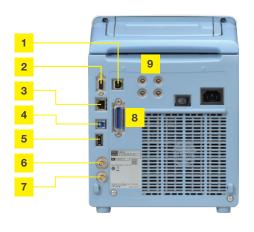

For example, DLM3000 is 10 times faster at saving to internal storage and about 10 times faster when transferring to a PC." Get answers faster, even with large data sets.

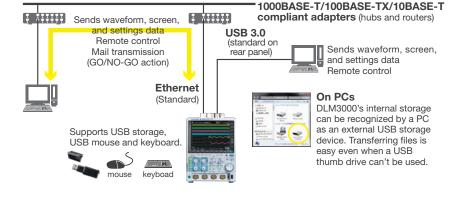

<sup>\*2</sup> When /C8 option (SSD) is installed for internal storage and USB3.0 mass storage connection is used for transfer. Compare with the conventional model (DLM2000).

## **Broad Connectivity and Easier Control**

- GO/NO-GO output terminal (optional)
  - RGB video signal output terminal
- **Ethernet**

- 4 USB-PC connection terminal
- USB peripheral connection terminal
- External trigger input

**Free Software** 

- Trigger output
- GP-IB connection terminal (optional)
- Probe power terminal (optional)

## **Software Control**

#### Off-line waveform XviewerLITE -Basic viewingdisplay and analysis Zoom, V-cursor, conversion to CSV format Waveform monitoring on a PC XWirepuller Remote monitor and operation Transferring image files Data transfer to a PC Control library "TMCTL" For Visual Studio **Command control** LabVIEW instrument driver\*1 \*3 **DL-Term** Interactive tool **Custom software** development MATLAB\*2\*3 WDF Access ToolBox

Transfer data file to MATLAB

## Optional Software Trial version available

## Xviewer -Advanced Analysis-

Advanced and useful functions are supported. Good for precise, off-line waveform analysis.

- Good for precise, off-line waveform analysis.

Auxiliary analysis functions	Trend functions (up to 4 trend waveforms)
CXPI Bus Signal Analysis	Functions (/F05 Option)'6
Applicable bus	CXPI JASO D 015-3:2015
Analyzable signals	CH1 to CH4, M1 to M4
Bit rate	19.2 kbps, 9.6 kbps, 4.8 kbps, User Define (an arbitrary bit rate from 4 kbps to 50 kbps with resolution of 10 bps)
Analyzable no. of frames	10000 frames max.
List display items	Analysis no., time from trigger position [Time (ms)], ID, DLC, W/S, CT, Data, CRC, error information, Wakeup/Sleep
GP-IB (/C1 Option)	
Electromechanical specificati	ions Conforms to IEEE std. 488-1978 (JIS C 1901-1987)
Protocol	Conforms to IEEE std. 488.2-1992
Auxiliary Input	
Rear panel I/O signal	External trigger input, External trigger output, GO/NO-GO output (/C1 Option), Video output
Probe interface terminal (from	nt panel) 2 terminals (DLM30x2), 4 terminals (DLM30x4)
Probe power terminal (rear p	anel) 2 terminals (/P2 option), 4 terminals (/P4 option)
Internal Storage (Standard	d model, /C8 Option)

#### Capacity

Standard model: Approx. 300 MB, /C8 option: Approx. 60 GB

#### Built-in Printer (/B5 Option)

Built-in printer 112 mm wide, monochrome, thermal

USB Peripheral Connection Terminal			
Connector	USB type A connector $\times$ 2 (front panel $\times$ 1, rear panel $\times$ 1)		
Electromechanical specifications	USB 2.0 compliant		
Supported transfer standards	High Speed, Full Speed, Low Speed		
Supported devices	USB Printer Class Ver. 1.0 compliant HP (PCL) inkjet printers, USB Mass Storage Class Ver. 1.1 compliant mass storage devices (Usable capacity: 8 TB, Partition format: GPT / MBR, File format: exFAT / FAT 32 / FAT 16)  *Please contact your local YOKOGAWA sales office for model names of verified devices		

	of verified devices
USB-PC Connection Terminal	
Connector	USB type B connector × 1
Electromechanical specifications	USB 3.0 compliant
Supported transfer standards	Super Speed, High Speed, Full Speed
Supported class	USBTMC-USB488 (USB Test and Measurement Class Ver. 1.0)
Ethernet	
Connector	RJ-45 connector × 1
Transmission methods	Ethernet (1000BASE-T/100BASE-TX/10BASE-T)
Supported services	Server: FTP, VXI-11, Socket Client: FTP, SMTP, SNTP, LPR, DHCP, DNS
General Specifications	
Rated supply voltage	100 to 120 VAC/220 to 240 VAC (Automatic switching)
Rated supply frequency	50 Hz/60 Hz

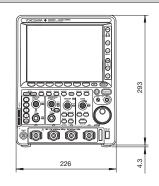

General Specifications	
Rated supply voltage	100 to 120 VAC/220 to 240 VAC (Automatic switching)
Rated supply frequency	50 Hz/60 Hz
Maximum power consumption	180 VA
External dimensions	226 (W) × 293 (H) × 193 (D) mm (when printer cover is closed, excluding protrusions)
Weight	Approx. 4.2 kg, With no options
Operating temperature range	5°C to 40°C

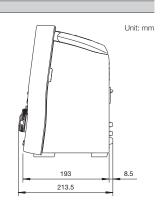

- \*\*1: Measured under standard operating conditions after a 30-minute warm-up followed by calibration. Standard operating conditions: Ambient temperature: 23°C±5°C, Ambient humidity: 55±10% RH Error in supply voltage and frequency. Within 1% of rating 
  \*\*2: Value in the case of repetitive phenomenon. The frequency bandwidth of a single-shot phenomenon is the smaller of the two values, DC to sampling frequency/2.5 or the frequency bandwidth of the repetitive phenomenon. 
  \*\*3: When the input section is shorted, the acquisition mode is set to Normal, accumulation is OFF, and the probe attenuation is set to 1:1.

  \*\*4: The LCD may include a few defective pixels (within 3 ppm over the total number of pixels including RGB).

  \*\*5: GO/NO-GO terminal is included in /C1 option.

## **External Dimensions**

## **Model and Suffix Codes**

Model <sup>11</sup>	Suffix code	Description		
DLM3022		Digital Oscilloscope: 2 ch, 200 MHz		
DLM3024*2		Mixed Signal Oscilloscope: 4 ch, 200 MHz		
DLM3032		Digital Oscilloscope: 2 ch, 350 MHz		
DLM3034 <sup>-2</sup>		Mixed Signal Oscilloscope: 4 ch, 350 MHz		
DLM3052		Digital Oscilloscope: 2 ch, 500 MHz		
DLM3054 <sup>-2</sup>		Mixed Signal Oscilloscope: 4 ch, 500 MHz		
Power cord	-D	UL/CSA Standard and PSE compliant		
	-F	VDE/Korean Standard		
	-Q	British Standard		
	-R	Australian Standard		
	-H	Chinese Standard		
	-N	Brazilian Standard		
	-T	Taiwanese Standard		
	-B	Indian Standard		
	-U	IEC Plug Type B		
Language	-HJ	Japanese message and panel		
	-HE	English message and panel		
	-HC	Chinese message and panel		
	-HG	German message and panel		
	-HF	French message and panel		
	-HK	Korean message and panel		
	-HL	Italian message and panel		
	-HS	Spanish message and panel		
Option	/LN	No switchable logic input (4 ch model only)		
-	/B5	Built-in printer (112 mm)		
-	/M1 <sup>*3</sup>	Memory expansion option (4 ch model only) During continuous measurement: 25 Mpoints; Single mode: 125 Mpoints/250 Mpoints <sup>4</sup>		
	/M2*3	Memory expansion option (4 ch model only) During continuous measurement: 50 Mpoints; Single mode: 250 Mpoints/500 Mpoints <sup>4</sup>		
	/P2*5	2 probe power terminals (for 2 ch model)		
	/P4*5	4 probe power terminals (for 4 ch model)		
- - - - - - -	/C1	GP-IB interface + GO/NO-GO terminal		
	/C8	Internal storage (60 GB)		
	/G02	User-defined math function (4 ch model only)		
	/G03	Power supply analysis function (4 ch model only)		
	/F01	UART + I <sup>2</sup> C + SPI trigger and analysis (4 ch model only)		
	/F02	CAN + CAN FD + LIN trigger and analysis (4 ch model only)		
	/F03	FlexRay trigger and analysis (4 ch model only)		
	/F04	SENT trigger and analysis (4 ch model only)		
	/F05	CXPI trigger and analysis (4 ch model only)		

#### Standard Main Unit Accessories

Power cord, Passive probe<sup>-6</sup>, Protective front cover, Panel sheet<sup>-7</sup>, Soft carrying case for probes, Printer roll paper (for /B5 option), User's manuals's

- \*1: Standard memory capacity: During continuous measurement: 12.5 Mpoints; Single mode: 50 Mpoints/125 Mpoints (when odd channels only)
  \*2: Logic probes sold separately. Please order the model 701988/701989 accessory logic
- probes separately
- \*3: When select from these options, please select only one.
- \*4: When odd channels only
  \*5: Specify this option when using current probes or other differential probes that don't support probe interface.
- \*6: 701937, per number of channels. \*7: Except suffix code "-HE".
- \*8: Start guide as the printed material, and User's manual as CD-ROM are included.

## **Accessory Models**

Acceptally Models				
Name	Model	Specification		
Logic probe (PBL100)	701988	1 $\mbox{M}\Omega$ input resistance, toggle frequency of 100 MHz		
Logic probe (PBL250)	701989	100 $k\Omega$ input resistance, toggle frequency of 250 MHz		
Passive probe <sup>1</sup>	701937	10 MΩ (10:1), 500 MHz, 1.3 m		
FET probe <sup>-1</sup>	700939	DC to 900 MHz bandwidth, 2.5 M $\Omega$ /1.8 pF		
100:1 voltage probe	701944	DC to 400 MHz bandwidth, 1.2 m, 1000 Vrms		
100:1 voltage probe	701945	DC to 250 MHz bandwidth, 3 m, 1000 Vrms		
Differential probe	701920	DC to 500 MHz bandwidth, max. ±12 V		
Differential probe	701921	DC to 100 MHz bandwidth, max. ±700 V		
Differential probe	701922	DC to 200 MHz bandwidth, max. ±20 V		
Differential probe (PBDH1000)	701924	DC to 1 GHz bandwidth, 1MΩ, max. ±25 V		
Differential probe	701926	DC to 50 MHz bandwidth, 5000 Vrms/7000 Vpeak		
Differential probe (PBDH0150)	701927	DC to 150 MHz bandwidth, max. ±1400 V		
Differential probe	700924	DC to 100 MHz bandwidth, max. ±1400 V		
Differential probe	700925	DC to 15 MHz bandwidth, max. ±500 V		
Current probe <sup>*2</sup>	701917	DC to 50 MHz bandwidth, 5 Arms, High-sensitivity		
Current probe <sup>'2</sup>	701918	DC to 120 MHz bandwidth, 5 Arms, High-sensitivity		
Current probe (PBC050)*2	701929	DC to 50 MHz bandwidth, 30 Arms		
Current probe (PBC100) <sup>-2</sup>	701928	DC to 100 MHz bandwidth, 30 Arms		
Current probe <sup>*2</sup>	701930	DC to 10 MHz bandwidth, 150 Arms		
Current probe <sup>*2</sup>	701931	DC to 2 MHz bandwidth, 500 Arms		
Deskew correction signal source	701936	For deskew correction		
Go/No-Go Cable	366973	For GO/NO-GO output terminal		
Printer roll paper	B9988AE	Lot size is 10 rolls, 10 meters each		
Probe stand	701919	Round base, 1 arm		
Soft carrying case	701964	With 3 pockets for storage		

<sup>\*1:</sup> Please refer to the Probes and Accessories brochure for probe adapters.

## **Accessory Software**

Model	Name	Specification
701992-SP01	- Xviewer	Standard version
701992-GP01		With MATH functions

## Additional Option License for DLM3000\*1

Model	Suffix code	Description
709811	-G02	User defined math
	-G03	Power supply analysis function
	-F01	UART + I <sup>2</sup> C + SPI trigger and analysis
	-F02	CAN + CAN FD + LIN trigger and analysis
	-F03	FlexRay trigger and analysis
	-F04	SENT trigger and analysis
	-F05	CXPI trigger and analysis

<sup>\*1:</sup> Separately sold license product (customer-installable). (4 ch model only)

## NOTICE

 $\bullet$  Before operating the product, read the user's manual thoroughly for proper and safe operation.

This is a Class A instrument based on Emission standards EN61326-1 and EN55011, and is designed for an industrial environment. Operation of this equipment in a residential area may cause radio interference, in which case users will be responsible for any interference which they cause.
